

Help learners choose the right career path with Optimi Classroom and Career Compass

Career Compass can guide learners on their journey by using a questionnaire to match their personality types with compatible work environments. The questionnaire is based on Dr John L. Holland's scientifically proven personality theory, which is the most widely used career counselling theory in the world.

Career Compass provides learners with:

Career options suited to their personalities

Personalised and instant results

Career insights

By completing the 30-minute online questionnaire, learners can obtain most of the answers to their career questions.

Once the questionnaire has been completed, the learner will be linked to a comprehensive career database. The database is updated continuously and provides information about the learner's personalised career options, including:

A job description for each career – so they know exactly what each job option entails.

The relative demand in the South African labour market for each career option – so they can choose a career that is likely to have job openings after they have graduated.

Bright outlook occupations – these are the jobs that are expected to grow rapidly in the next few years.

Training institutions in South Africa available for the career of their choice – here learners can see where to study to pursue the career option best suited to them.

A continuously updated database – learners can explore their career options over time and keep an eye on the evolving opportunities in the job market.
